Document information

Document: Release notes MapEO
Publication Date: 29/04/2024
Release number: 2024.02
Planned release date: 13/05/2024
Impact release on running operational processes: Users with existing API implementations should review their code related to field layer selection.

MAPEO API

2024.02.01: Adaption annotations endpoint
The GET annotations endpoint has been modified to:
- allow easy separation for different annotation **types. This solves the issue when mixing up annotations and field layers for extraction of plot statistics**
- For annotations of type field, filter on annotations linked to a specific fieldlayer.

To get all annotations in a region of type field:
https://api.mapeo.be/api/mapeo/region/{regionid}/annotations?type=field
To get all annotations in a region of type field and linked to a specific fieldlayerid:
https://api.mapeo.be/api/mapeo/region/{regionid}/annotations?type=field&fieldLayerId={fieldlayerid}

Just listing all annotations can still be done as before:
https://api.mapeo.be/api/mapeo/region/{regionid}/annotations
Other annotation types are not used often and not highlighted in this documentations. For full details on the API changes, consult the swagger documentation.
