

Document information

Document: Release notes MapEO

Publication Date: 18/06/2025

Release number: 2025.03

Planned release date: 30/06/2025

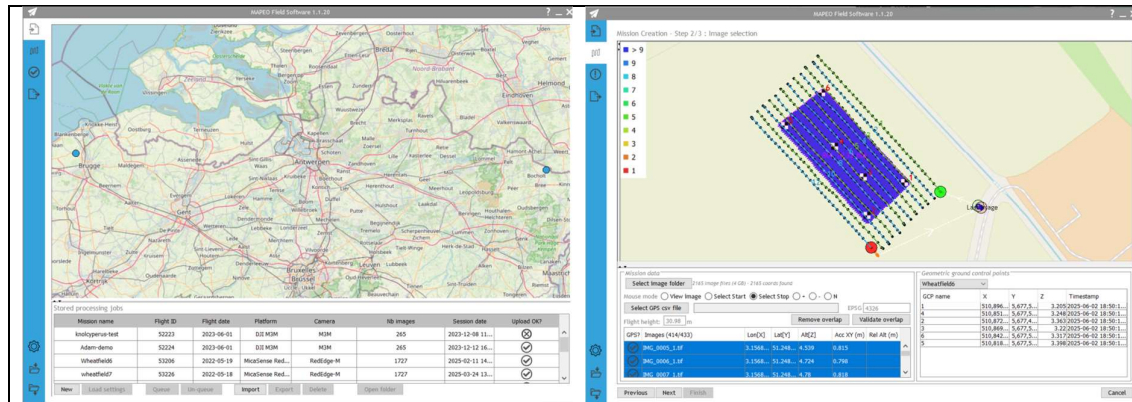

General:

No changes to the MAPEO API are made this release!

MAPEO FIELD SOFTWARE

2025.03.01: Replace of Bing maps as background layer.

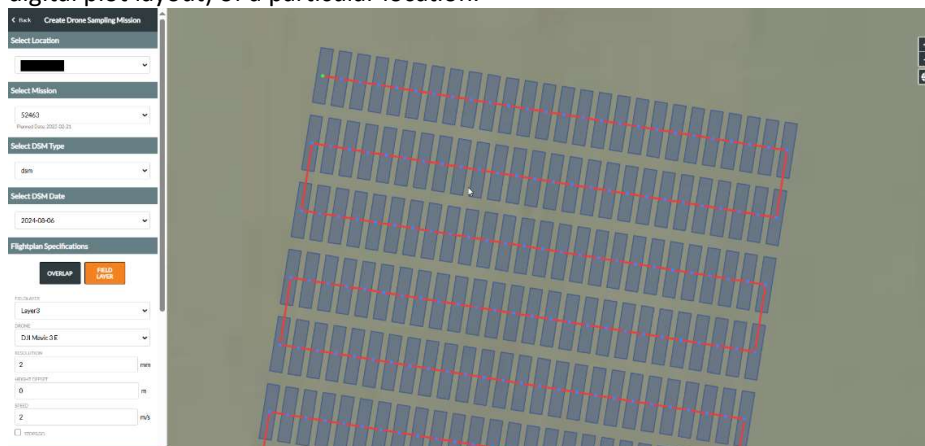

Due to policy adaptation from Bing maps, we needed to replace the current satellite background layer to an OpenStreetMap Layer. Users who are still using an older version of the field software will notice a background layer which is greyed out and are advised to switch to the latest version of the field software which uses OSM. You can use following reference to update the field software: <https://support.mapeo.be/hc/en-us/articles/4760713223964-How-to-install-the-MAPEO-Field-Software>

MAPEO APPLICATION

2025.03.02: Mission planning for phenotyping case.

Users can now build their own drone sampling mission based on a field layer (which contains the digital plot layout) of a particular location.

2025.03.03: New products and styles

For the agricultural users, we have defined new New chl-a & satellite-based products along with a Style update for existing flowercount & satellite products

Bugfixes:

- Fix for bad IMU input from DJI M3E and M3M drones related to drone sampling image processing
