

Document information

Document: Release notes MapEO
Publication Date: 7/01/2025
Release number: 2025.01
Planned release date: 20/01/2025

General:

Users who have implemented the API to retrieve a list of available field layers before extracting plot statistics should review the newly available field properties.

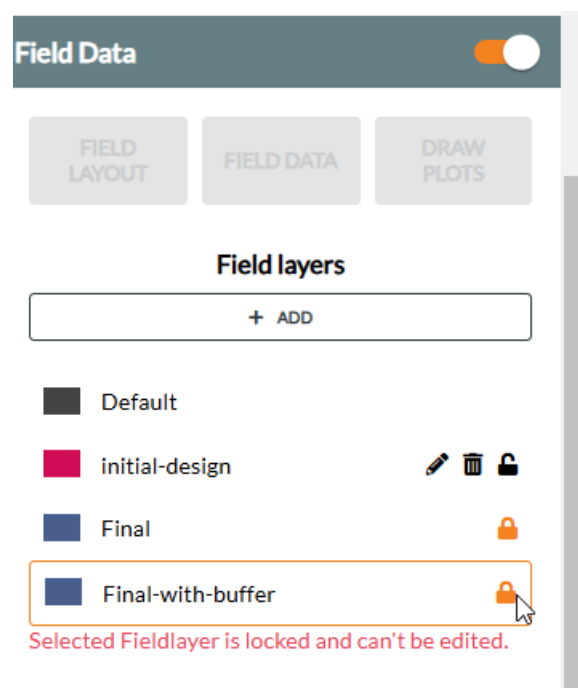

MAPEO Field Software

No updates

MAPEO Application

2025.01.01: Locking and unlocking of field layers

From now on it will be possible to lock and unlock field layers to avoid unintentional modification of a field layer.

2025.01.02: Actual Resolution added to the order export

The actual resolution of the final drone products, which is calculated during the image processing step is added to the order export.

2025.01.03: Export Invoice details

We have added a new functionality in the My Orders tab which allows the user to export an overview of all (or a selection of) finished orders to be used for invoicing. The overview contains a summary of

the finished/cancelled missions and the individual order exports as an excel file. Together with this we have moved our order export from extension type .csv to an excel file.

2025.01.04: Filter added to support filtering on invoice reference

In the MyOrders overview, an additional filter option is now added to the orders overview to filter on invoice reference

2025.01.05: Support point geometry for count products

Count product now supports "point geometry" as a format, eg. for AI detection of specific "markers".

Bug fixes

- Histogram upper out of bounds color has been set to transparant. Similar to lower out of bounds color.
- Adapting field layout - preview will not disappear anymore when points are moved.
- Application name will not be modified anymore in the filter box on the location pane.
- Fixed zooming to remain possible when creating field data plots.
- Order overview sorted on date.

MAPEO API

2025.01.06: Locking and unlocking of field layers

To support the locking and unlocking of field layers, we have added a new boolean property 'locked'. Our 'fields' API has been updated to support this property. Users can use this attribute to filter on specific field layers which they are using for automated field layer exports.
