Document information

Document: Release notes MapEO
Publication Date: 7/06/2023
Release number: 2023.04
Planned release date: 19/06/2023
Impact release on running operational processes: Users should make sure to download their results and don't start new requests in the week before the deployment. At the moment of deployment, it is possible the request history is lost. Hence, we do not guarantee that ongoing requests are still available after deployment.

MAPEO Operations

2023.04.01: Improved quality control for count products
In very rare cases, the AI detection workflow generated invalid geometries, which could lead to issues eg. when deriving statistics. Such cases can now be detected and corrected for.

2023.04.02: Direct georeferencing workflow (beta)
For dedicated customers, a direct georeferencing workflow will be released and evaluated this summer. General support for this workflow will be announced at a later date.

2023.04.03: AI model management
To improve our AI portfolio, an AI model management system will be used from now on. The system will be deployed now and evaluated further after the summer season.

MAPEO Application

2023.04.04: Collection of bug fixes
- FD-5665: A first YPM (Yield Potential Map) product per region is no longer auto-generated for user segments that don't use this product type

> IMPORTANT NOTE:
> Users should make sure to download their results and don't start new requests in the week before the deployment. At the moment of deployment, it is possible the request history is lost. Hence, we do not guarantee that ongoing requests are still available after deployment.
